

FOR GROUNDBREAKING PROGRESS

Extremely powerful TE210 short-tail tunnel excavator breaks through, even when it's tight

With the innovative and reliable Terex® TE210, you have the ability for efficient maneuvering when driving small and mid-sized tunnel cross-sections – even in narrow tunnels. At the optimum machine height, powerful break-out forces are employed with profile accuracy even in low tunnels, thanks to the ingenious Terex® kinematics. Terex-specific, specialized solutions allow for individualized drive variants, boom reaches and attachment tools. It is already well known that Terex tunnel excavators have safe driving and operating comfort and excellent serviceability, without high-tech electronics. And at Terex, it's nothing new: high performance doesn't have to come with high cost. Talk to us about it!

Features:

- 28 - 30 t service weight, 165 kW exhaust-optimized diesel power
- Standard working height 4,800 mm - 8,500 mm, 18 - 45 m² application profile
- Extremely robust compact design
- Short tail for narrow tunnels
- Narrow dipper stick allows good visibility of the work area
- Special Terex® tunnel kinematics in power flow with high break-out forces
- Exact and profile-accurate break-out

Options:

- Customer-specific, specialized solutions for larger and smaller reaches
- Tunnel-specific 132 kW electrical drive incl. cable reel, without restricting pivot range
- High power flexibility with attachment devices (direct or quick-change) such as attachment Cutting Units, rock breakers, drill rigs...
